

Conversion Kit Instructions

1. Using a cutting torch, carefully cut off the old trigger mechanism. Try not to damage the existing cross piece. Grind off any remaining bits of weld to leave a flat surface.

2. Center the trigger mechanism under the seat, and clamp it there while you trace the holes on the front and back of the trigger mechanism. Drill 3/8" holes in the front and back of the trailer frame as marked.

3. Bolt the trigger mechanism to the trailer frame.

4. Bolt or weld the pivot plate on the right side of the frame (viewing the tank from the front).

5. Remove old seat. Place the new seat centered above the trigger "hook". Clamp the seat securely in place and attach it to the existing hinges using the 1/4". Place a lock-washer and nut on the underside of the seat. Break off the bolt flush with nut and grind off any sharp edge.
